

Rohini Gudimetla

Full Stack Software Developer

rohinigudimetla174@gmail.com | 857-316-8283 | Boston, MA | linkedin.com/in/rohinigudimetla | github.com/rohinigudimetla

Summary

Full Stack Software Developer with a Master of Science in Software Development from Boston University and professional experience shipping production web applications independently. Designed and deployed a full-stack production system across eight technology layers, React/TypeScript, Spring Boot, PostgreSQL, Redis, Docker, Kubernetes, GitHub Actions CI/CD, and AWS, with zero failed production deployments across the full build period. Translates Figma interface specifications into production React components backed by object-oriented Java APIs, with security controls and unit test coverage built in at every layer. Maintains 16 architectural decision records documenting trade-off rationale at every layer across the full stack.

Technical Skills

Languages: Java, TypeScript, JavaScript, SQL	Infrastructure: AWS (EC2, S3, RDS, CloudFront, CloudWatch), Docker, Kubernetes
Frameworks: Spring Boot, React, Spring Security, Hibernate	Testing: JUnit 5, Mockito, Vitest, React Testing Library
Databases: PostgreSQL, Redis	Tools: Maven, Liquibase, Tailwind CSS, Bootstrap, Git
CI/CD: GitHub Actions	

Work Experience

Software Development Consultant , Early Digital Analytics Initiative(earlstage-digi-analytics.vercel.app github.com/rohinigudimetla/earlstage-digi-analytics) <i>Next.js, Supabase, Vercel, JavaScript</i>	Oct 2025 – Nov 2025
--	---------------------

- Built and deployed a client booking system as the sole developer using Next.js, integrating Google Calendar OAuth2 for automated event creation and Resend for transactional email delivery to clients and consultants.
- Architected a Supabase backend across four RLS-protected tables, enforcing all data access exclusively through Next.js server-side API routes using a service-role admin client to prevent client-side credential exposure.
- Diagnosed and resolved three Vercel production build failures spanning Google OAuth2 initialization, Resend dynamic imports, and Supabase environment variable fallbacks, shipping a zero-defect Next.js 15 application to production.

Front End Developer Intern , World Salon (world-salon.com) <i>React, Bootstrap, JavaScript</i>	Jul 2024 – Jan 2025
--	---------------------

- Built three responsive React frontend pages from Figma design specifications using Bootstrap CSS and JavaScript, delivering production UI components to the live member-facing product.
- Integrated existing RESTful API endpoints into React components using JavaScript fetch, handling response data parsing and conditional rendering across all three pages.

Projects

PocketLibrary (pocklib.site github.com/rohinigudimetla/Pocket-Library)
- Architected a production-grade full-stack system across Spring Boot, PostgreSQL, Redis, Kubernetes, and AWS, documenting every architectural decision across 16 ADRs with explicit trade-off rationale, resulting in zero failed production deployments across the full build period. - Deployed Spring Boot to a minikube Kubernetes cluster on EC2 with liveness and readiness probes via Spring Actuator, replacing a manual 12-step SSH deploy sequence with a 4-minute automated GitHub Actions pipeline that performs zero-downtime rolling updates. - Engineered 14 REST endpoints across a repository-pattern Spring Boot architecture, managing PostgreSQL schema evolution through 7 Liquibase migrations and all data access through JPA and Hibernate. - Secured the API guided by an OWASP Top 10 audit, implementing Spring Security role-based access, JWT authentication with Redis-backed token revocation on logout, and Bucket4j rate limiting to block brute-force login attempts. - Decoupled global frontend state into two React Context API providers, AuthContext for authentication and AppContext for application data, eliminating cross-concern re-renders and keeping each consumer isolated to the state it actually uses. - Built 25 tests across JUnit 5, Mockito, Vitest, and React Testing Library, prioritizing security-layer coverage to achieve 76% on JWT authentication and access control, with the suite running in GitHub Actions on every push. - Automated React/TypeScript frontend deployment to AWS S3 and CloudFront via a path-filtered GitHub Actions pipeline that triggers exclusively on client directory changes and completes in 27 seconds.

Education

Boston University , Master of Science, Software Development	May 2025
Amrita School of Engineering , Bangalore, India	May 2023
Bachelor of Technology, Electronics and Computer Engineering
